U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05)

## **Continuation Sheet (PTO-303)**

Application No.

Although the Claiming of "is disposed so that the air flow from the air inlet hits the inclined portion, and" in claim 7 would require futher search and consideration. It appears that the Nagasaka reference would still meet the amended claim because the air entering the inlet would hit the inclined portion as shown in figure 1b.

The applicants arguments regarding claims 1 and 11 are not persuasive. The applicant fails to distinctly point out in the claims and their arguments how their invention patentably distiguishes over Kohmura. The shunt plate from the Kohmura teaching, as shown in figure 5, is adjacent the first passage and is distant from the from the imaginary line which is parallel to the axis of the intake passage and passes through the top end of the air inlet. The top end of the air inlet can be considered the top, meaning above the centerline, of the air inlet. Top end does not mean the very top of the air inlet. The definition of adjecent is not distant. Therefore shunt plate of Kohmura is adjacent to the first passage as shown in figure 5.
